

TA meeting notes 11/02/26

Topics Covered:

- Current Progress
- Personas and User Stories
- Sprint Planning and Future Work
- Questions

Current Progress:

- Creating a mental health support app for students
- System features defined however TA advised that we need to start with clearly defined personas as this will decide features and further decisions
- Currently have one defined student persona - need to create more
- Defined roles for group members
- Some defined features are counsellor related (e.g live support) when there is no defined counsellor persona

Persona and User Stories:

- The project/app must be designed around the needs of the users/personas rather than what the team thinks
- Need to derive features from user stories
- Recommended workflow for personas and features:
 - Create persona
 - Develop user stories and scenarios
 - Derive features from these stories and scenarios
- Different user types with different challenges need to be considered e.g:
 - 2 student personas
 - A student might face dyslexia or colour blindness, how would we design the app to be accessible for them
 - 2 counsellor personas
 - A counsellor might struggle with technology because of age or be hard of hearing, how can the app be accessible for them
- Need to consider privacy and anonymity for our personas
- Features in the software need to be directly linked to a persona or user story with explanation

Sprint Planning and Future Work:

- Group needs to define the Minimum Viable Product (MVP)
- First sprint needs to include first core features and a working product/app
- First sprint does not have to include everything, features such as login feature can be a simulation as it is not a main feature

- As of Week 6 group is expected to evaluate the outcome Sprint 1, decide which features should be added, and explain how these features have been decided based on TA feedback and current progress
- Recommended to use GitHub for collaboration and for everyone to be familiar with what the developers are doing

Questions:

- Asked for clarification if Class, Sequence, Activity and Use Case diagrams were needed
 - Likely that Class and Sequence diagram are required but TA will confirm Activity and Use Case diagram next meeting
- Asked if whole team needed to be involved in the coding aspect of project
 - Not required but recommended that everyone in the team takes part in discussions around coding and communicates with developers

NEXT TA MEETING:

Thursday 19th February at 3:00pm

TA meeting notes 19/02/26

Topics Covered:

- Persona Feedback
- Features and MVP
- UML Diagrams (Class, Sequence)
- Sprint Planning and Future Work

Current Progress:

- 5 total personas and user stories created
 - 2 counsellor personas, 3 student personas
- From the personas and user stories, a list of features have been proposed for the mental health app
- Class diagram completed
- Began front end development of app

Persona Feedback:

- TA advised that the current personas are acceptable (currently have 5)
- For the persona section in the document, TA clarified that the “owner” of a user story is the persona’s name
- User stories should inform the design document rather than the other way round

Features and MVP:

- TA highlighted that our current features are very barebones and needs more development
- Need to clearly describe the Minimum Viable Product, including the acceptance criteria
 - E.g a functioning UI or the ability to send messages
- To test the features, writing out the acceptance criteria is sufficient for Sprint 1
 - However, for Sprint 2, real testing of the code will be required

UML Diagrams:

- Clarified which diagrams are required
 - No need for a Use Case or Activity diagram
- We only need a Class and Sequence diagram which should cover all the features
 - Class diagram completed already
- It may be necessary to create multiple sequence diagrams to cover all the features or to combine multiple sequence diagrams into one
- TA recommended to only do one Class diagram
- Diagrams should be started now in Sprint 1 but only need to be completely finished for Sprint 2

Sprint Planning and Future Work:

- Need to create document to clearly define MVP
- TA clarified that the 'predicted workload hours' defined in the submission document are not directly linked to stories as not everyone will be expected to work on a specific story
 - Will seek more clarification on this and how to assign workload hours
- For next week's meeting, recommended to have a demonstration of the first sprint
- Ideally Sprint 1 should be finished within the next 2 weeks so the group can begin Sprint 2

NEXT TA MEETING:

26/02/26 at 2:20pm

TA meeting notes 26/02/26

Topics Covered:

- Sprint 1 Demonstration
- MVP Review & Reflection
- UML Diagram Progress

Current Progress:

- Demo of Sprint 1 completed (Frontend and Backend)
- Sequence and Class diagrams created

Sprint 1 Demonstration:

- Current landing page only supports one student - no login currently
- TA told us that functionality of our Sprint 1 is good
 - We need to look back on the design document and MVP for our features
- Currently, we don't list any features
 - Need to go into the design document and compare what our MVP is to what we have currently implemented
 - E.g Were we too ambitious, should we have added more, this is for our own reflection
- To test our Sprint 1 demo, we can use an automated test and simply state whether it has met the acceptance criteria
 - Make sure to define acceptance criteria as well

UML Diagrams:

- Currently have 4 sequence diagrams
 - TA advised that we could potentially merge the diagrams into one
 - He also stated he will seek more clarification on this as it is not clearly defined in the brief
- Do not need to have the sequence diagrams finalised for Sprint 1
- For Sprint 2, need to make sure that changes are made when more features are added

Sprint Planning and Future Work:

- Make detailed document of MVP
 - Compare current features to MVP
- Summary of Sprint 1 document
- Discuss the next steps for Sprint 2
 - The next features such as the FAQ and Booking
- Testing for Sprint 1

NEXT TA MEETING:

04/03/26 at 3:20pm

TA meeting 04/03/26

Topics Covered:

- Current Progress
- Additional Features for Sprint 2
- Justification of Design Decisions
- Documentation for Sprint 1 & 2
- Future Work

Current Progress:

- Discussed potential new features for both the student and counsellor/wellbeing officer sides.
- The current split between student and counsellor sides is good.

Additional Features for Sprint 2:

- Students should have the ability to cancel bookings.
- Potential feature allowing students to request additions to an FAQ, though the TA noted this is not a high priority.

Sprint Planning and Future Work:

- New Feature Prioritisation
- The TA provided feedback on feature importance:
 - Booking System: This is an extension of the core functionality and should be a priority.
 - Monitoring/Questionnaire: This feature is considered more important than an FAQ. The justification for this feature could be for streamlining and monitoring, allowing the system to identify high-risk students.
 - FAQ: This is less critical than the monitoring feature.
- Design Justification: For any new features added, the design document must include a strong justification. The team must explain what they learned from Sprint 1 and how those reflections guided the decision to improve the product with these new features.

Documentation for Submission:

- An announcement will be made on how to manage documentation for Sprint 1. It should likely be kept as a separate file.
- The final submission will likely require both the Sprint 1 documentation (with reflections) and the updated Sprint 2 documentation. Any changes made from the Sprint 1 docs will form the Sprint 2/final submission.
- AI Acknowledgement: If using ChatGPT to generate content like FAQ text, this must be acknowledged in the documentation.

Questions:

- Meeting Schedule: The TA asked if the group would prefer to continue with two meetings or switch to one. (This decision would be made by the group after the meeting).

TA Meeting 25/03/26

Topics Covered:

- Current Progress
- App Demonstration
- Testing
- Class diagrams
- GitHub and Documentation
- Future Work

Current Progress:

- Continued development into Sprint 2
 - Completed almost all features (Support thread, Urgency, FAQ, Booking)
- TA said that the current app has made good progress

App Demonstration:

- Demonstrated the current version of the app
- TA gave feedback that it is functioning well and we have implemented the features well

Testing:

- Need to add automated testing for Sprint 2
 - Different from Sprint 1 where could just write acceptance criteria and see if it meets it
- Recommended to use unit tests and store it in a repository in GitHub
- When testing, TA said to ensure that it is linked to user stories and acceptance criteria

Class diagrams:

- Showed TA our current class diagrams and they recommended us to introduce superclasses and subclasses
 - E.g User superclass with Student and Counsellor subclass
- TA also advised that we should add more relationships to improve clarity

GitHub and Documentation

- TA advised to add GitHub repository links to the design document to show as evidence
 - Use the repository links to also demonstrate testing and development progress
- Ensure the unit tests are clearly labelled

Future Work:

- Implement the automated testing
- Refine class diagrams
- Integrate GitHub structure into documentation
